

Dubai's Jumeirah Golf Estates selects the *Inforemer*[™] for its golf courses and estates

The screenshot shows the top navigation bar with the Jumeirah Golf Estates logo and four course logos: FIRE (by Greg Norman), EARTH (by Greg Norman), WATER (by Vijay Singh), and WIND (by Garcia, Dye, Norman). Below these are four image-based tabs: Living (autumn leaves), Golf (green leaves), About (blue sky), and Contact (blue water). The main banner features a golf cart with a large LCD screen displaying a golf course map, with the text "A Connected Community" overlaid.

A Connected Community

Throughout the Jumeirah Golf Estates communities, the latest technology from GPS Industries has been employed to make living more convenient and enjoyable. Advanced smart-home devices ease home management, while inbuilt entertainment systems allow for video-on-demand and pay-per-view services.

A unique asset-management system lets you track your car, pets - even your children - within the community via discrete radio tags. And the entire community is protected by a state-of-the-art monitoring system, providing local and remote surveillance around the clock.

The community's golf carts come preinstalled with GPSI's innovative Inforemer-HD system, which vividly depicts each hole and provides precise distance measurement and other information via a 10.4-inch LCD panel.

A dedicated community internet portal will help keep you up-to-date on events and happenings at Jumeirah Golf Estates, while also allowing you to order products and services to be delivered to your home. And accessing the internet couldn't be more convenient - the entire community is covered by a wireless hotspot, allowing you to get online wherever you go.

The *Inforemer*[™] has been chosen by Jumeirah Golf Estates to be its exclusive GPS solutions provider on its Fire, Earth, Water and Wind golf courses. Fire and Earth are designed by Greg Norman, Water by Vijay Singh and Wind is a collaboration of Sergio Garcia, Pete Dye and Greg Norman.

In addition, the entire residential community of the Estates will leverage on the *Inforemer's* WiFi infrastructure and line of accessories to provide location tracking of vehicles and visitors, security monitoring, wireless broadband internet access and turn the whole community into a wireless hotspot.

Jumeirah Golf Estates is a landmark development that is set to become one of the world's most prestigious residential golf communities. Surrounding its 4 golf courses are 13 residential communities that will house 1,000 families in luxurious living.
